EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science (Part-Time / Online)

Specialization: Machine Learning. Coursework aligned with predictive modeling.

Bachelor of Science in Mathematics, GPA: 3.72

Atlanta, GA

Jan. 2026 – May 2027 (Expected)

Aug. 2020 – May 2024

ACTUARIAL EXAMS

Exam FM (Financial Mathematics): Passed Dec. 2025

Exam P (Probability): Passed Jan. 2026

Society of Actuaries

Society of Actuaries

EXPERIENCE

Technical Cofounder

Palmetto Intelligence — getpalmetto.com

May – Sep. 2025

Atlanta, GA

- Architected a data pipeline to ingest unstructured civic records, utilizing LLM orchestration to convert raw text into structured JSON for quantitative analysis
- Engineered a high-performance persistence layer using PostgreSQL (with PostGIS), enabling geospatial querying to assess property-specific risks and location intelligence

Equity Trader

Trillium Trading

Sep. 2024 – Apr. 2025

Chicago, IL

- Conducted rigorous analysis of market events and macroeconomic data to develop new trading hypotheses, managing risk within strict capital parameters
- Instituted a disciplined trade journaling and review process to systematically drive strategy improvement
- Leveraged advanced order management systems to achieve best execution in high-volatility environments

Undergraduate Teaching Assistant

Georgia Institute of Technology

Jan. 2023 – May 2024

Atlanta, GA

- Guided engineering students through statistical projects in Python/R (Regression, Forecasting) and taught weekly studio sessions for Linear Algebra and Multivariable Calculus

Software Engineering Intern

Bank of America

June – Aug. 2022

Dallas, TX

- Developed data validating Python scripts for an ETL pipeline for the Climate and Environment Risk Data Platform, supporting analytics on bank-financed emissions

RESEARCH

Mathematics Summer REU

School of Mathematics — Georgia Tech

May – Aug. 2023

- Conducted research on Sobolev regularization properties of Markov transition operators via Fourier series representations under Professors Alex Blumenthal and Evan Camrud

Predictive Analytics and Intelligent Systems Lab

H. Milton Stewart School of Industrial and Systems Engineering — Georgia Tech

Jan – May 2022

- Developed a Variational Autoencoder (VAE) to process sensor data from combustion engines, achieving 85% diagnostic accuracy and enabling predictive modeling of engine health

PROJECTS

P&C Insurance Claim Severity Modeling

Nov. 2025

- Engineered a pure premium pricing model using the French Motor Third-Party Liability dataset, merging frequency and severity tables to analyze risk across 670,000+ policies
- Benchmarked a traditional two-stage GLM (Poisson/Gamma) against an XGBoost model (Tweedie objective), utilizing Lift Charts and Lorenz Curves to validate risk stratification
- Achieved an RMSE statistical tie (7,160) between methods, demonstrating that strong linear factors like Bonus-Malus outperformed complex non-linear interactions for this population

SKILLS & INTERESTS

Languages & Tools: Python, SQL, R, Pandas, Excel (VBA), PowerPoint

Actuarial/Quant: GLMs, Time Series Analysis, Duration/Convexity, Cash Flow Analysis

Interests: Weightlifting, calisthenics, swimming, philosophy, music (alto saxophone, piano)
